

USER GUIDE FOR JRE SETTINGS ON USERS PC/LAPTOP

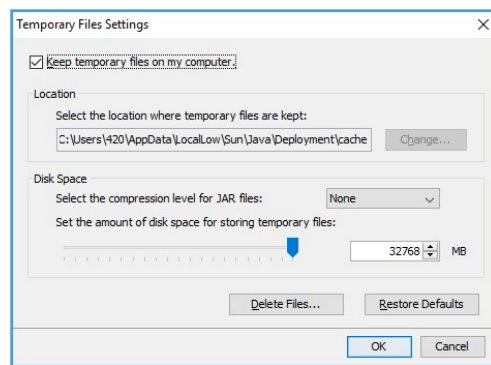

1. Ensure JRE 8 is installed
2. Open **Control Panel** and look for **JAVA (32-bit)**

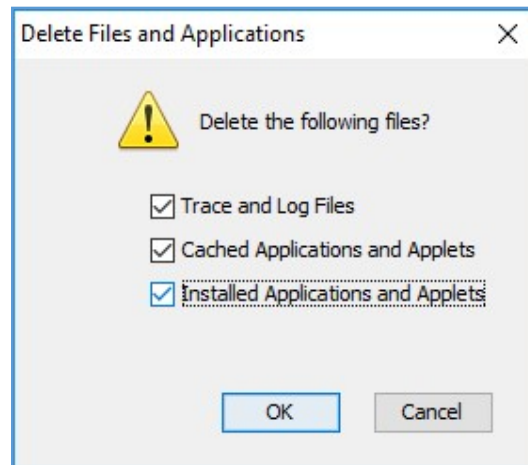

3. On the **General** tab, under **Temporary Internet Files** category,
 - a. click **Settings...**

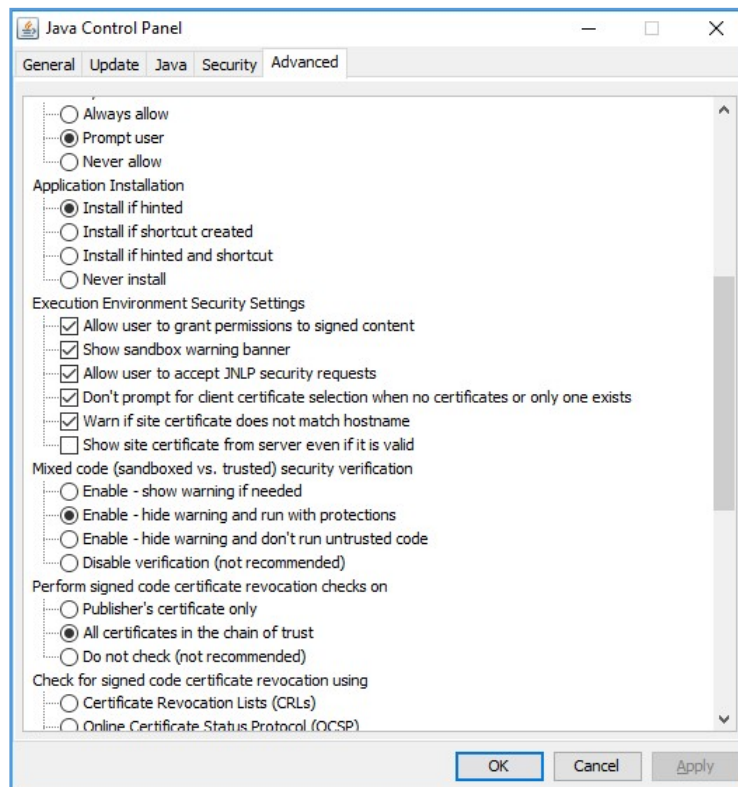

- b. then click **Delete Files...**

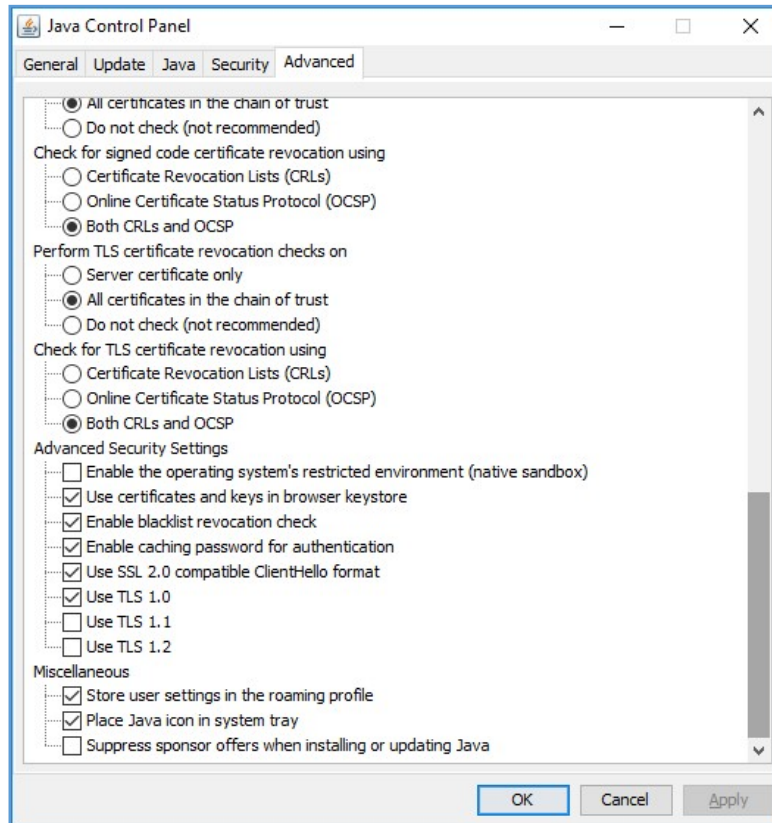

- c. select all three options, then click **OK**

4. On **Advanced** tab, look for **Mixed code (sandbox vs trusted) security verification** and choose **Enable – hide warning and run with protections**

5. Also on **Advanced** tab, look for **Advanced Security Settings**. Make sure options “**Use TLS 1.1**” and “**Use TLS 1.2**” is **unticked**.

6. Click **OK** and **restart** all browsers
